

1 BASIC CAP

A Basic Cap construction features flower net material throughout the top with wefting attached, creating stability for the cap.

2 WEFTING

Hair wefts are a collection of fibers or strands sewn together at their tips, creating a linear gathering of fibers. They are then posted to the laces of the cap to create the base construction.

3 VELVET MATERIAL

Placed along the hairline to ensure a soft, comfortable fit.

4 PRE-TEASING

Pre-teasing, or bottom tease, is put at the base of the weft to support the style and add volume.

5 LACES

Extend from the nape to the top, providing stretch throughout the base, molding to the shape of your head, and ensuring a secure, custom fit.

6 BUCKLE ADJUSTMENTS

Buckle closures at the nape are used to adjust and customize the circumference of your wig, allowing for a more secure fit.

7 EAR TABS

Used to adjust the placement of the wig for a proper fit. Open ear tabs allow you to secure the wig with bobby pins and are great for wearing glasses. Small, flexible wire stays ensure a custom fit.
